I am a third-year Computer Science Ph.D. student at Carnegie Mellon University and am supported by an NSF graduate research fellowship. I spent the first two years of my Ph.D. working between mobile computing and applied machine learning and I now work with Zico Kolter on machine learning and optimization. I am particularly interested in improving our understanding of important modeling problems in computer vision, language, and reinforcement learning through the use of deep learning, optimization (sometimes convex), theory, and statistics.

As an example, we've recently been exploring the intersection of deep learning and convex optimization with input convex neural networks (ICNNs): neural networks that are convex with respect to some of the inputs. Our preprint is available at arXiv:1609.07152 and shows applications to multi-label classification, image completion, and continuous-action reinforcement learning.

I strongly believe in open science and reproducible research and actively publish code on my Github profile. I am also the author of OpenFace, which is an open source face recognition project that uses deep learning.

Education

○ Ph.D. in Computer Science, Carnegie Mellon University — Aug 2014 – Present
○ M.S. in Computer Science, Carnegie Mellon University — Aug 2014 – May 2016
○ B.S. in Computer Science, Virginia Tech (3.99/4.00) — Aug 2011 – May 2014
○ Northside High School (Roanoke, Virginia) — May 2011

Research Experience

○ Carnegie Mellon University, Prof. Zico Kolter — Apr 2016 – Present
  ○ Machine learning and optimization

○ Carnegie Mellon University, Prof. Mahadev Satyanarayanan — Aug 2014 – Apr 2016
  ○ Applied machine learning and mobile computing

○ Virginia Tech, Prof. Jules White — May 2012 – May 2014
  ○ Mobile computing, cyber-physical systems, and security

○ Virginia Tech, Prof. Layne Watson — Jan 2013 – May 2014
  ○ Scientific computing, global/stochastic optimization, and bioinformatics

○ Virginia Tech, Prof. Binoy Ravindran — Nov 2012 – Mar 2014
  ○ Heterogeneous compilers
